Workflow da APRENDIZAGEM DE MÁQUINA NA SUPERVISIONADA

Description of Workflow:

1. Collect training data with needed volume and quality (fit for purpose and diverse enough to avoid a biased model later in the process).
2. Process data in such a way that relevant features for the problem statement are identified and prepared. Also separate data into training and validation set.
3. Choose appropriate algorithm(s) for the given problem. Design model and tune parameters.
4. Model is trained based on the given data. Validate how well the model performs.
5. Iteratively modify the model until it performs well against the training and validation data.
6. Test the model against the hold out set from the collected data. Then export the model for productive use.
7.
8. Expose the trained model to new data / events. Model will return a prediction accordingly. If a feedback loop is included, model could also improve itself.

8. Expose the trained model to new data / events. Model will return a prediction accordingly. If a feedback loop is included, model could also improve itself.

APRENDIZAGEM DE MÁQUINA POR REFORÇO
(PRESSUPÕE INTERAÇÃO COM ALGUM MEIO- Princípio Cibernético)

Reinforcement Learning:

1. An agent faces a certain situation (known or unknown) within a given environment.
2. In this situation, the agent takes an action based on existing knowledge. With unknown situations, a random action is taken.
3. The outcome of the action will result in a new state / situation. Also, if the action is favorable towards the overall goal, the agent receives a reward.
4. Until the overarching goal is not achieved, the agent will continue with the process. With each iteration, positive actions are reinforced.

Deep Learning -2019: Bibliotecas e Arcabouços (Frameworks) com suporte GPU

Tool	Licence	Written in	Computation graph	Interface	Popularity	Usage	Creator (notes)
TensorFlow (Numerical framework)	Open source, Apache 2.0	C++, Python	Static with small support for dynamic graph	Python, C++[a], Java[a], Go[a]	Very High Growing very fast	Academic Industrial	– **Google**
Keras (Library)	Open source, MIT	Python	Static	Python Wrapper for TensorFlow, CNTK, DL4J, MXNet, Theano	High Growing very fast	Academic Industrial	F. Chollet
CNTK (Framework)	Open source, Microsoft permissive license	C++	Static	Python, C++, BrainScript, ONNX	Medium Growing fast	Academic Industrial Limited mobile solution	– **Microsoft**
Caffe (Framework)	Open source, BSD 2-clause	C++	Static	C++, Python, MatLab	High Growing fast	Academic Industrial	Y. Jia **BAIR**
Caffe2 (Framework)	Open source, Apache 2.0	C++	Static	C++, Python, ONNX	Medium-low Growing fast	Academic Industrial Mobile solution	Y. Jia **Facebook**
Torch (Framework)	Open source, BSD	C++, Lua	Static	C, C++, LuaJIT, Lua, OpenCL	Medium–low Growing low	Academic Industrial	R. Collobert, K. Kavukcuoglu, C. Farabet
PyTorch (Library)	Open source, BSD	Python, C	Dynamic	Python, ONNX	Medium Growing very fast	Academic Industrial	A. Paszke, S. Gross, S. Chintala, G. Chanan
MXNet (Framework)	Open source, Apache 2.0	C++	Dynamic dependency scheduler	C++, Python, Julia, MatLab, Go, R, Scala, Perl, ONNX	Medium Growing fast	Academic Industrial	– **Apache**
Chainer (Framework)	Open source, Owners permissive license	Python	Dynamic	Python	Low Growing low	Academic Industrial	– **Preferred Networks**
Theano (Numerical framework)	Open source, BSD	Python	Static	Python	Medium-low Growing low	Academic Industrial	Y. Bengio **University of Montreal**
